The time period for reply, if any, is set in the attached communication.

<b>Office Action Summary</b>	<b>Application No.</b> 10/501,701	<b>Applicant(s)</b> NOSKER ET AL.	
	<b>Examiner</b> Jeffrey C. Mullis	<b>Art Unit</b> 1796	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claims 1, 3, 4, 7-9 and 11-19 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The specification as filed does not broadly disclose that all HDPE/PC or HDPE/ PC and ABS compositions have a "modulus greater than the additive contribution of each polymer" but in fact page 6 refers only to the figures describing blends in which HDPE is present at levels of 60% or greater and in combination 40% or less PC or 40% or less PC and ABS. Furthermore the fact that the specification discloses that the preferred melt flow rate ranges are not prefixed by "about" implies some other results are obtained for less preferred compositions than those disclosed on page 6 of the specification and especially given that Figure 5 shows a small portion of the composition range barely meeting applicants characteristic requirements those skilled in the art would not assume that applicants were in possession of the concept of compositions having applicants "additive contribution" characteristic for other melt flow rates. Applicants combination of limitations regarding melt flow, concentrations and "additive contribution" are therefore new matter.

All previous rejections are hereby withdrawn based on applicants remarks and amendment and therefore applicants declaration under 37 CFR 1.132 are moot.

US 2007/0082995 and 2002/0099160, previously cited of interest disclose MFR data at paragraphs 92 and 158 respectively for various polycarbonates.
